Chapter 4

Class Documentation

4.1 Image::h Class Reference

The documentation for this class was generated from the following file:

• include/Image.hpp

4.2 Image Class Reference

```
#include <Image.hpp>
```

Classes

class h

Public Member Functions

• arma::mat Image_load (arma::mat, std::string)

Carga de Imagen pgm a mat.

• Image ()

Constructor de la clase.

- Image (arma::mat)
- void Dimension ()

Obtiene las dimensiones de la matriz.

int Get_pixel (int, int)

Obtiene el valor de un pixel.

void Get_pixels ()

Imprime todos los pixeles de la matriz imagen.

• arma::mat Gaussian_noise (double)

Aplica Ruido Gaussiano a una matriz.

arma::mat Lost_pixels_noise (double)

Aplica Perdida de pixeles a una matriz.

arma::mat Salt_and_pepper_noise (double)

Aplica Ruido Sal y Pimienta a una matriz.

• arma::mat Impulsive uniform noise (double)

Aplica Ruido Impulsivo Uniforme a una matriz.

void SaveImage (arma::mat, std::string)

Guarda la matriz en formato pgm.

double PSNR (arma::mat, arma::mat)

Calculo del PSNR.

double MAE (arma::mat, arma::mat)

Calculo del MAE.

• double MSE (arma::mat, arma::mat)

Calculo del MSE.

arma::mat Filtering (arma::mat, int, int)

Aplica un filtrado usando el promedio o la mediana para remover ruido.

- void Detection Face (std::string)
- void Four_windows_opencv (const char *, const char *)

Carga cuatro imagenes en una ventana de opencv.

• void Two_windows_opencv (const char *, const char *, std::string, std::string)

Carga dos imagenes en una ventana de opencv.

• arma::mat Noise_remover (arma::mat, int)

Aproximación Robusta por bloques No solpados (ventana 8x8)

• arma::mat Overlap (arma::mat)

Aproximación por bloques solpados (ventana 8x8)

arma::mat ldtc Robusta (arma::mat, int)

Aproximación Robusta por bloques solpados (ventana 8x8)

• double wmedianf (arma::vec &, arma::vec &)

Calculo de la mediana.

• arma::mat Diccionary ()

Diccionario de la transformada del Coseno.

 arma::vec Fast_awmr (arma::vec &y, arma::mat &A, int sparsity, int itmax, double beta, double tol, double epsilon, int numcoefperiter, double Kpar)

Funcion necesaria para idt_Robusta()

~Image ()

Private Attributes

- int cols
- int rows
- · arma::mat matrix

4.2.1 Constructor & Destructor Documentation

```
4.2.1.1 Image::Image ( )
```

Constructor de la clase.

basic_funcions.cpp

Descripcion: Constructor de la clase Image para acceder a sus metodos internos

Test

```
Image I;
I.Dimension();

4.2.1.2 Image::Image ( arma::mat )

4.2.1.3 Image::~Image ( )

4.2.2 Member Function Documentation

4.2.2.1 void Image::Detection_Face ( std::string )
```

Diccionario de la transformada del Coseno.

Descripcion: Funcion necesaria para idt_Robusta()

Basado en los Articulos:

4.2.2.2 mat Image::Diccionary ()

Ramírez J. y Paredes J. (2014). Robust Sparse Recovery Base On Weighted Median Operator. IEEE International Conference on Acoustic, Speech and Signal Processing (ICASSP). ```
4.2.2.3 void Image::Dimension ( )
```

Obtiene las dimensiones de la matriz.

Descripcion: Permite obtener la dimension nxn de la matriz.

Returns

Retorna la dimension de la imagen nxn.

Test

```
basic_funcions.cpp
Image I;
I.Dimension();
```

4.2.2.4 vec Image::Fast_awmr (arma::vec & y, arma::mat & A, int sparsity, int itmax, double beta, double tol, double epsilon, int numcoefperiter, double Kpar)

Funcion necesaria para idt Robusta()

Basado en los Articulos:

Ramírez J. y Paredes J. (2014). Robust Sparse Recovery Base On Weighted Median Operator. IEEE International Conference on Acoustic, Speech and Signal Processing (ICASSP). Department of Electrical Engineering, Universidad de Los Andes, Mérida, Venezuela. Doi: 978-1-4799-2893-4/14/\$31.00. ```
4.2.2.5 mat Image::Filtering ( arma::mat , int , int )
```

Aplica un filtrado usando el promedio o la mediana para remover ruido.

Descripcion: Permite aplicar un filtrado a una matriz, utilizando el sparse. Se selecciona una ventana de IxI a la cual se le aplica un promedio o la mediana para restaurar la imagen. Se calcula utilizando el tamaño de la ventana I y el pixel central de la ventana, luego se aplica el promedio o mediana de los pixels adyacentes al central.

Parameters

matrix	es la matriz con ruido a la cual se le aplicara el filtrado.
1	es el tamaño de la ventana
flag	es la bandera que indica si se efectua el promedio o la mediana. Donde el
	promedio es igual 0 y la mediana igual a 1

Returns

filt matrix: Retorna la matriz con el filtrado.

Test

```
filtering_median.cpp filtering_mean.cpp
mat matrix;
int I = 5;
int flag = 0;
Filtering(matrix, I, flag);
```

4.2.2.6 void Image::Four_windows_opencv (const char * imag1, const char * imag2, const char * imag3, const char * imag4, const char * label1, const char * label2, const char * label3, const char * label4)

Carga cuatro imagenes en una ventana de opencv.

Descripcion: Permite cargar cuatro imagenes en una ventana de opencv

Parameters

imag1	es la ruta o ubicación de la imagen1
imag2	es la ruta o ubicación de la imagen2Imag3 Imag4
label1	es el nombre de la imagen1
label2	es el nombre de la imagen2Imag3 Imag4

Returns

Abre la ventana opency con cuatro imagenes

Test

main.cpp

```
const char* imag1= "src/Resources/images_salt_and_pepper/lady_256_0_1.pgm"; const char* imag2= "src/Resources/images_salt_and_pepper/lady_256_1.pgm"; const char* imag3= "src/Resources/images_salt_and_pepper/lady_256_10.pgm"; const char* imag4= "src/Resources/images_salt_and_pepper/lady_256_100.pgm"; Four_windows_opencv(imag1, imag2, imag3, imag4, label1, label2, label3, label4);
```

4.2.2.7 mat Image::Gaussian_noise (double nivel)

Aplica Ruido Gaussiano a una matriz.

Descripcion: Permite aplicarle Ruido Gaussiano a una matriz. El Ruido Gaussiano es una matriz de media 0 y con una desviacion estandar variable.

Parameters

nivel	es el nivel de varianza variable
	Parametros Internos:
	A es una matriz gaussiana de dimensiones iguales a la matriz y de media 0
	y varianza 1
	B es una matriz donde se almacena la matriz gaussiana de media 0 y el
	calculo de una varianza determinada
	std es la desviacion estandar

Returns

value: Retorna la matriz con el ruido aplicado

Test

gaussian_noise.cpp

```
int nivel=0.1;
Gaussian_noise(nivel1);
```

4.2.2.8 int Image::Get_pixel (int row, int col)

Obtiene el valor de un pixel.

Descripcion: Permite obtener el valor de un pixel de la matriz de la imagen original

Parameters

row	es el numero de filas de la matriz
col	es el numero de columnas de la matriz

Returns

Retorna el valor (value) de un pixel

Test

```
basic_funcions.cpp
Image I;
int row=5;
int col=5;
I.Get_pixel(row, col);

4.2.2.9 void Image::Get_pixels( )
```

Imprime todos los pixeles de la matriz imagen.

Descripcion: Permite obtener e imprimir todos los pixeles de la imagen.

Returns

value: Retorna todos los pixeles.

Test

```
basic_funcions.cpp
Image I;
I.Get_pixels();
```

4.2.2.10 mat Image::ldtc_Robusta (arma::mat , int)

Aproximación Robusta por bloques solpados (ventana 8x8)

Descripcion: Permite remover ruido mediante el uso de una ventana 8x8 solapado por media (0) y mediana ponderada (1).

Basado en los Articulos:

Ramírez J. y Paredes J. (2014). Robust Sparse Recovery Base On Weighted Median Operator. IEEE International Conference on Acoustic, Speech and Signal Processing (ICASSP). Department of Electrical Engineering, Universidad de Los Andes, Mérida, Venezuela. Doi: 978-1-4799-2893-4/14/\$31.00. Recuperado de: http://www.mirlab.org/conference_papers/International_Conference/ICASSP%202014/papers/p1050-ramirez.pdf

Ramírez J. y Paredes J. (2015). Robust Transforms Based on the Weighted Median Operator. IEEE Signal Processing Letters, 22(1), pp. 120 – 124. doi: 10.1109/LSP.2014.2349351. Recuperado de: http://ieeexplore.ieee.org/document/6880779/

Parameters

matrix_r	es la matriz con ruido.
flag	es la bandera que indica si se efectua el promedio o la mediana. Donde el
	promedio es igual 0 y la mediana igual a 1

Returns

Retorna la matriz sin ruido.

Test

```
idtc_Robusta_median.cpp idtc_Robusta_mean.cpp
mat matrix;
int flag = 0;
Idtc_Robusta(matrix, flag);
```

4.2.2.11 mat Image::Image_load (arma::mat , std::string)

Carga de Imagen pgm a mat.

Descripcion: Permite cargar la imagen en formato pgm a mat

Parameters

matrix	es la matriz que contine los pixeles de la imagen.
ruta	es la ubicacion o localizacion de la imagen.

Returns

Retorna si la matriz fue cargada o si hubo problemas en la carga.

Test

```
basic_funcions.cpp
mat matrix;
string ruta = "src/Resources/images/house.256.pgm";
Image_load(matrix, ruta);
```

4.2.2.12 mat Image::Impulsive_uniform_noise (double nivel)

Aplica Ruido Impulsivo Uniforme a una matriz.

Descripcion: Permite aplicarle Ruido Impulsivo Uniforme a una matriz

Parameters

```
nivel es el porcentaje de ruido.
```

Returns

value: Retorna la matriz con el ruido aplicado.

Test

```
uniform_impulsive_noise.cpp
double nivel=0.1;
Impulsive_uniform_noise(nivel);
```

4.2.2.13 mat Image::Lost_pixels_noise (double nivel)

Aplica Perdida de pixeles a una matriz.

Descripcion: Permite aplicarle Perdida de Pixeles a una matriz

Parameters

```
nivel es el porcentaje de ruido
```

Returns

value: Retorna la matriz con el ruido aplicado

Test

```
lost_Pixels_noise.cpp
double nivel=0.1;
Lost_pixels_noise(nivel);
```

4.2.2.14 double Image::MAE (arma::mat , arma::mat)

Calculo del MAE.

Descripcion: Permite calcular el MAE (Error promedio absoluto) de una imagen con ruido y una imagen filtrada

Parameters

matrix_r	es la matriz con ruido.
matriz_f	es la matriz filtrada o recuperada

Returns

Retorna el valor del MAE

Test

```
filtering_mean.cpp
mat matrix_r;
mat matriz_f;
MAE(matrix_r, matriz_f);

4.2.2.15 double Image::MSE( arma::mat , arma::mat )
```

Calculo del MSE.

Descripcion: Permite calcular el MSE (Error cuadratico medio) de una imagen con ruido y una imagen filtrada

Parameters

matrix_r	es la matriz con ruido.
matriz_f	es la matriz filtrada o recuperada

Returns

Retorna el valor del MSE

Test

```
filtering_mean.cpp
mat matrix_r;
mat matriz_f;
MSE(matrix_r, matriz_f);
```

4.2.2.16 mat Image::Noise_remover (arma::mat , int)

Aproximación Robusta por bloques No solpados (ventana 8x8)

Descripcion: Permite remover ruido mediante el uso de una ventana 8x8 no solapado

Parameters

matrix	es la matriz que se le removerá el ruido.
image_tam	es el tamaño de la imagen.

Returns

removermatrix: Retorna la matriz sin ruido.

Test

```
noise remover.cpp
```

mat matrix;

```
int image_tam = 256;
Noise_remover(matrix, image_tam);
4.2.2.17 mat Image::Overlap ( arma::mat )
```

Aproximación por bloques solpados (ventana 8x8)

Descripcion: Permite remover ruido mediante el uso de una ventana 8x8 solapado

Parameters

```
matrix es la matriz que se le removerá el ruido.
```

Returns

removermatrix: Retorna la matriz sin ruido.

Test

```
overlap.cpp
mat matrix;
Overlap(matrix);
```

4.2.2.18 double Image::PSNR (arma::mat , arma::mat)

Calculo del PSNR.

Descripcion: Permite calcular el PSNR de una imagen con ruido y una imagen filtrada

Parameters

matrix_r	es la matriz con ruido.
matriz_f	es la matriz filtrada o recuperada

Returns

Retorna el valor del PSNR

Test

```
filtering_mean.cpp
mat matrix_r;
mat matriz_f;
PSNR(matrix_r, matriz_f);
```

4.2.2.19 mat Image::Salt_and_pepper_noise (double nivel)

Aplica Ruido Sal y Pimienta a una matriz.

Descripcion: Permite aplicarle Ruido Sal y Pimienta a una matriz

Parameters

```
nivel es el porcentaje de ruido
```

Returns

Retorna la matriz con el ruido (RG)

Test

```
salt_pepper.cpp
double nivel=0.1;
Salt_and_pepper_noise(nivel);
```

4.2.2.20 void Image::SaveImage (arma::mat , std::string)

Guarda la matriz en formato pgm.

Descripcion: Permite guardar una matriz mat en formato pgm

Parameters

matrix	matriz que contine los pixeles de la imagen.
ruta	ubicacion o localizacion de la imagen.

Returns

Retorna si la matriz fue guardada o si hubo problemas al guardar.

Test

```
gaussian_noise.cpp
mat matrix;
string ruta= "src/Resources/images/house.256.pgm";
SaveImage(matrix, ruta);
```

```
4.2.2.21 void Image::Two_windows_opencv ( const char * , const char * , std::string , std::string )
```

Carga dos imagenes en una ventana de opencv.

Descripcion: Permite cargar dos imagenes en una ventana de opency con sus respectivas etiquetas (label).

Parameters

imag1	es la ruta o ubicación de la imagen1.
imag2	es la ruta o ubicación de la imagen2.
label1	es el nombre de la imagen1.
label2	es el nombre de la imagen2.

Generated on Sat Jun 10 2017 15:59:16 for ImageProcessingCemisid by Doxygen

Returns

Abre la ventana opency con dos imagenes.

Test

```
main.cpp
   const char* imag1= "src/Resources/images_salt_and_pepper/lady_256_0_1.pgm";
   const char* imag2= "src/Resources/images salt and pepper/lady 256 1.pgm";
   string label1 = "Imagen1";
   string label2 = "Imagen2";
   Two_windows_opencv(imag1, imag2, label1, label2);
4.2.2.22 double Image::wmedianf ( arma::vec & , arma::vec & )
Calculo de la mediana.
Descripcion: Funcion necesaria para idt_Robusta()

```

5.16 src/Image_load.cpp File Reference

```
#include "../include/Image.hpp"
#include <iostream>
#include <armadillo>
```

Functions

double Average_Median (vec vector, int flag)
 Calcula el promedio y la mediana.

5.16.1 Function Documentation

```
5.16.1.1 double Image::Average_Median ( vec vector, int flag )
```

Calcula el promedio y la mediana.

Descripcion: Permite calcular el promedio y la mediana.

Parameters

vector	es el vector al cual se le calculará el promedio o la mediana
flag	cuando flag = 0 se calcula el promedio y cuando flag = 1 se calcula la medi-
	ana

Returns

```
value: Retorna la matriz con el ruido
vec B;
Average_Median(B, 0); //Promedio-Media
Average_Median(B, 1); //Mediana
```

5.17 src/main.cpp File Reference

```
#include <iostream>
#include <armadillo>
#include "../include/Image.hpp"
```

Functions

```
• int main ()
```

Titulo: Funcion de Inicio.

5.17.1 Function Documentation

```
5.17.1.1 int main ( )
```

Titulo: Funcion de Inicio.

Descripcion: Comienzo de codigo.

FA = I.Filtering(SC, 5);

5.18 src/Two_windows_opencv.cpp File Reference

```
#include "../include/Image.hpp"
```

```
#include <opencv2/imgproc/imgproc.hpp>
